

# Script Experiment Habits

---

## Before the instructions

There will be several screens with instructions. It's very important that you read the instructions carefully so you can perform well in the task. On the bottom of the last screen it will say "please call the experimenter to continue", so just call the experimenter when you are ready. We will go over the main points of the task with you and we can discuss any questions you might have.

---

## After the instructions, before training

Do you have any questions? - *Usually participants did not have any questions after reading the instructions. If they do have a question this question was answered by repeating a snippet from the explanation below. After which the whole explanation provided below would be repeated. If no question was asked the whole explanation was given.*

Explanation: "As you read in the instructions the goal of the experiment is for you to find the best way to earn coins by moving the joystick. While the block on the right side of the screen is displayed you are welcome to make the left movement with the joystick any time you want and as often as you want (during this the experimenter showed the left movement a couple of times). While the block on the left side of the screen is displayed you are welcome to make the right movement with the joystick any time you want and as often as you want (during this the experimenter showed the right movement a couple of times). The coins you earn during the experiment will all be deposited in **two different piggybanks**, one for silver coins and one for gold coins, provided they are not full. **As you read in the instructions; these two coins are both worth 40 credits irrespective of their color.** At a certain point during the experiment you will be able to collect coins from the screen with the mouse and these coins will also be deposited in the respective piggy banks, provided they are not full. **It is important that you remember which action lead to you earning silver coins and which action lead to gold coins.** There is no reason to stop responding.

*After this explanation we go through several images with possible screens to make sure the participants are somewhat familiar with the screens they will encounter during the experiment. Participants are asked to explain what they are allowed to do during the two possible screens of training (with the block on either of two sides).*
